

STIMULAN®

POWER TO TRANSFORM OUTCOMES

CASE STUDY

Courtesy of Mr Robert Morley

Specialist Registrar in Podiatric Surgery, Buxton Hospital, Derbyshire, UK

Clinical particulars

67-year-old male patient with Type 2 diabetes presented with a 1 year history of a right foot ulcer and symptoms of infection with osteomyelitis caused by *Staphylococcus aureus*. Previous treatment involved 9 months I.V. antibiotics and regular re-dressing with no improvement. Most oral antibiotics were contraindicated due to a history of *Clostridium difficile*.

Treatment

After surgical debridement and thorough irrigation, **STIMULAN** was used to fill the resulting dead space. Gentamicin and vancomycin were used to treat the infection. A 3 day perioperative course of I.V. antibiotic therapy was administered based on a bone biopsy with no other antibiotics used post-operatively.

Outcome

5 weeks post-surgery, the surgical wound and ulcer had healed and erythema and swelling had fully reduced. Blood results showed ESR and CRP were within normal limits and x-rays showed no deterioration. At 3 months, the patient was mobilizing normally, free from infection and the **STIMULAN** had fully absorbed. Implantation of **STIMULAN** negated the need to perform a full forefoot amputation.

For indications, contraindications, warnings and precautions see Instructions for Use. The treating physician is responsible for deciding the type and quantity of antibiotic used. Concurrent use of locally administered antibiotics may affect setting time. The mixing of antibiotics with the STIMULAN Kit/ STIMULAN Rapid Cure device is considered off-label usage of the medicinal product. To do so is at the professional risk of the surgeon / healthcare professional. This brochure may include the use of STIMULAN or techniques that go beyond the current clearance/ approval granted by the relevant regulatory authority. Please contact your local representative for further information.
