

# STIMULAN<sup>®</sup>

## PREPARATION GUIDE FOR STIMULAN Rapid Cure

Use the mixing solution from the tube provided in the pack. Do not add any other fluid.  
View a preparation guide video at [biocomposites.com](https://biocomposites.com)

1

Open outer packaging using standard aseptic 'non-touch' technique to avoid contact with contents. Aseptic personnel only must handle the inner pack

2

Empty **STIMULAN** Rapid Cure powder into the sterile mixing bowl provided

3

Add **STIMULAN** Rapid Cure mixing solution and mix thoroughly until a smooth paste is formed (approx. 30 seconds). Do not overmix. Paste will have a working time of 1-2 minutes and will set approximately 4 minutes after mixing

4

Select the size of bead required and apply a uniform layer of paste onto the bead mat provided. Use the paste applicator to ensure complete filling of each bead cavity

5

Allow paste to set undisturbed for at least 8 minutes after mixing. Flex bead mat to release beads

6

Check structural integrity by compressing a bead between thumb and index finger

For indications, contraindications, warnings and precautions see Instructions for Use. Concurrent use of locally administered antibiotics may affect the setting time.
